Dietzel, Adolf and Flörke, Otto W.
THE ACTION OF SULFATE IN THE MELTING PROCESS (Die Wirkung von Sulfat beim Einschmelzvorgang). [1960] [12]p. 12 refs.
Order from SLA mi$2.40, ph$3.30 61-10510

Trans. of Glastechnische Berichte (West Germany) 1959, v. 32, no. 5, p. 181-185.

Comparative melts of sulfate-free and sulfate-containing glasses were made. Observations with the thermal microscope showed that the sulfate containing batches began to melt sooner and that the residual quartz grains were more uniformly dispersed than with the corresponding sulfate free batches, in which the sand was concentrated at the melt surface and formed the skin as described in 1914 by Galstharp and Parkinson. These phenomena could be readily explained with the help of ideas developed according to which the sulfate prevents flotation of the batch residuals. (Author)(A lecture given at the Symposium on Glass Melting of (Materials--Ceramics, TT, v. 5, no. 8) (over)
